

MINO PEPTIDES

MEDIA FACT SHEET · FOR PRESS AND EDITORIAL USE

Company fact sheet.

*A reference document for journalists, editors, analysts,
and partners seeking verified information about Mino
Peptides.*

Company at a glance.

Mino Peptides is a business-to-business wholesale platform supplying pharmaceutical-grade peptide compounds to licensed clinical practices across the United States. The company works exclusively with credentialed medical spas, aesthetic practices, longevity clinics, integrative medicine groups, and enterprise multi-location networks.

Company Name	Mino Peptides
Business Model	Business-to-business wholesale supply of peptide therapeutics to licensed clinical practices
Founded	Privately held, co-founded by Elizabeth Straus and Brandon Howard, MD
Headquarters	New Jersey / New York metropolitan area
Portfolio	Thirty-nine compounds across six therapeutic categories
Customer Base	Licensed practitioners, medical spas, aesthetic practices, longevity clinics, integrative medicine groups, enterprise networks
Pricing Structure	Three-tier wholesale framework (Foundation, Growth, Enterprise)
Clinical Platform Affiliate	RegenRX Health Institute, Paramus NJ (flagship clinical platform)
Primary Contact	hello@mino.life
Website	mino.life

Leadership.

Mino Peptides was founded by two operators with complementary backgrounds spanning healthcare operations, finance, and clinical medicine.

ELIZABETH STRAUS

Chief Executive Officer and Co-Founder

Elizabeth Straus is the Chief Executive Officer and Co-Founder of Mino Peptides. She brings an extensive healthcare operations background to the company, having previously served as Executive Vice President at CareOne, one of the largest privately held healthcare operators on the East Coast, where she helped oversee a network of more than eighty facilities. She is also a co-founder of 18 Medical MSO, a New Jersey based physician management services organization that grew to become one of the largest independent MSOs in the state, supporting more than four hundred and fifty physicians. Ms. Straus is a United States military veteran.

BRANDON HOWARD, MD

Chief Medical Officer and Co-Founder

Brandon Howard, MD, is the Chief Medical Officer and Co-Founder of Mino Peptides and the Medical Director of RegenRX Health Institute, the company's affiliated clinical platform based in Paramus, New Jersey. Dr. Howard is board-certified in Internal Medicine and brings clinical leadership spanning hospital-based practice, integrative medicine, and regenerative therapeutics. In his dual role, he oversees clinical standards for the Mino wholesale platform and directs the clinical operations of the RegenRX Health Institute and its growing network of physician partner locations.

The portfolio.

The Mino portfolio spans thirty-nine compounds organized into six therapeutic categories. The portfolio is deliberately focused, with each compound selected because a credentialed clinician might reasonably incorporate it into patient care within an appropriate regulatory framework.

REGENERATION

Tissue repair,
gastrointestinal healing,
connective tissue recovery,
post-injury regeneration.

METABOLIC

Weight management,
glycemic control, body
composition, metabolic
optimization.

LONGEVITY

Cellular aging, senescence,
telomere biology, healthspan
research.

PERFORMANCE

Recovery, lean tissue
support, endurance, physical
performance protocols.

COGNITIVE

Focus, memory,
neuroprotection, cognitive
performance research.

VITALITY

Skin, hair, hormonal balance,
aesthetic practice.

REGULATORY LABELING

Every compound in the Mino portfolio is labeled with its current regulatory status: FDA-approved as a branded agent, investigational, research-only, or cosmetic. These distinctions correspond to real differences in how a compound may lawfully be prescribed, dispensed, compounded, or applied, and they are reflected in how Mino labels, packages, and documents every shipment.

SOURCING STANDARD

All compounds are sourced from cGMP-compliant manufacturing partners and verified through third-party analytical testing. Each lot ships with a Certificate of Analysis from an independent testing laboratory.

Market context.

Mino operates within one of the fastest-growing segments of contemporary medicine. The peptide therapeutics category has moved from niche scientific interest to mainstream clinical and consumer awareness over the past several years, driven primarily by the commercial success of GLP-1 receptor agonists and the broader cultural embrace of longevity and regenerative medicine.

MARKET SIZE AND GROWTH

Industry analysts tracking the global peptide therapeutics market place current market size in the range of approximately fifty billion dollars and project continued expansion through the end of the decade. The GLP-1 receptor agonist subcategory alone is projected by multiple research firms to grow substantially over the next several years, with Grand View Research estimating the category at approximately sixty-six billion dollars in 2025 and projecting growth to roughly one hundred and eighty-five billion dollars by 2033.

THE COMPETITIVE LANDSCAPE

The peptide therapeutics space is presently dominated at the branded pharmaceutical level by Eli Lilly and Novo Nordisk, whose combined GLP-1 franchises account for the substantial majority of category revenue. Below the branded pharmaceutical layer, a fragmented ecosystem of wholesale suppliers, compounding pharmacies, and research chemical vendors serves the clinical practice market. Mino positions itself within this wholesale layer as a platform built to pharmaceutical-grade standards rather than to the looser standards that have historically characterized the category.

REGULATORY ENVIRONMENT

The peptide category exists within a complex and rapidly evolving regulatory landscape. Recent Food and Drug Administration activity around compounding pharmacies and federal-level signals about peptide reclassification have reshaped the operating environment for suppliers serving clinical practices. The April 2026 FDA approval of Eli Lilly's oral GLP-1 therapy orforglipron is the most recent major category milestone and is expected to intensify competition within the metabolic peptide segment.

What makes Mino different.

Mino Peptides is built around four principles that differentiate the company from the broader wholesale peptide landscape.

ONE • SOURCING INTEGRITY

Mino maintains direct relationships with cGMP-compliant manufacturing partners rather than operating through grey-market intermediaries or repackaging research chemicals. Every lot is documented through the chain of custody from manufacturing facility to clinical account.

TWO • REGULATORY HONESTY

FDA-approved branded agents, investigational compounds, and research-only materials are labeled accurately at the compound level and again at the order level. The Mino sales team is trained not to elide these distinctions, which correspond to real differences in how a compound may lawfully be prescribed, dispensed, compounded, or applied.

THREE • CLINICAL DOCUMENTATION

Every compound shipped by Mino is accompanied by a Certificate of Analysis from an independent testing laboratory, along with storage protocols and clinical reference material appropriate to the prescriber. Documentation is treated as a core deliverable, not an afterthought.

FOUR • CREDENTIALLED ACCESS ONLY

Mino does not serve the consumer market and does not sell to non-credentialed buyers. Every account begins with a credentialing review confirming practitioner licensure, practice location, and the clinical context in which compounds will be used. This is the basis on which the company can make honest representations to its manufacturing partners about the clinical destination of every lot.

Press contact and resources.

Journalists, editors, analysts, and partners seeking comment, interviews, or additional information about Mino Peptides should reach out through the channels below. The company aims to respond to press inquiries within one business day.

PRESS CONTACT

All press and media inquiries should be directed to the general inquiry address with the subject line beginning “Press” followed by the nature of the request.

Press inquiries — hello@mino.life (*subject: Press*)

Interview requests — hello@mino.life (*subject: Interview Request*)

Speaking engagements — hello@mino.life (*subject: Speaking*)

AVAILABLE ASSETS FOR PRESS USE

Mino can provide the following materials on request: founder headshots and approved biographies, the company boilerplate in short, medium, and long forms, the complete wholesale catalog, the two-volume consumer compendium of hero compound profiles, the clinical practice guide and research reference guide, and the institutional investor trend report.

USAGE GUIDELINES

Journalists may quote from this fact sheet freely. Photographs, logos, and other brand assets may be used in editorial contexts with attribution. Commercial use of brand assets requires prior written permission from Mino Peptides.
