MINO PEPTIDES

The New Science of You

36 COMPOUNDS · 8 CATEGORIES · PHARMACEUTICAL GRADE

ABOUT THIS CATALOG

Precision at the *Molecular Level*

Mino Peptides is the pharmaceutical-grade peptide brand built for the next era of medicine — where longevity is clinical, where performance is biological, and where beauty begins at the gene level.

This catalog presents Mino's full therapeutic portfolio across eight categories: 36 compounds, each selected for clinical evidence, patient demand, and partner profitability. Every compound requires a valid prescription from a licensed physician.

Mino exists at the intersection of science and elegance — delivering compounds once available only to the most elite practitioners, now accessible through a curated partner network built on trust, compliance, and results.

Weight Management & Metabolic

Precision metabolic architecture — from the molecular level up.

Mino's metabolic portfolio represents the most clinically validated category in peptide therapeutics. Anchored by dual and triple incretin agonists, this collection addresses obesity, insulin resistance, and body composition through pathways once considered the exclusive domain of pharmaceutical giants.

Tirzepatide

Dual GLP-1/GIP Agonist · 5mg–60mg

The lead metabolic compound. Up to 22.5% weight loss in clinical trials. FDA-approved (Mounjaro/Zepbound). Once-weekly injection with dual-pathway appetite reduction and superior glycemic control.

IDEAL FOR

BMI ≥27, Type 2 diabetes, metabolic syndrome, aesthetic weight loss

GLP3-RT

Triple Agonist (GLP-1/GIP/Glucagon) · 5mg–30mg

The first triple incretin agonist. 24.2% weight loss in Phase 2 — the highest efficacy ever recorded. Adds direct fat oxidation via glucagon receptor activation.

IDEAL FOR

Patients seeking maximum results; those who plateaued on dual agonists

Cagrilintide

Amylin Analog · 5mg, 10mg

Long-acting amylin receptor agonist on a completely separate pathway from GLP-1. An elite stacking compound extending results beyond single-agent therapy.

IDEAL FOR

Multi-pathway protocols; patients wanting enhanced results

AOD-9604

Fat Metabolism Fragment · 5mg

Modified HGH fragment (aa 177-191). Stimulates targeted lipolysis without growth-promoting or diabetogenic effects. No blood sugar impact. No IGF-1 elevation.

IDEAL FOR

Patients who can't tolerate GLP-1s; athletes; targeted body composition

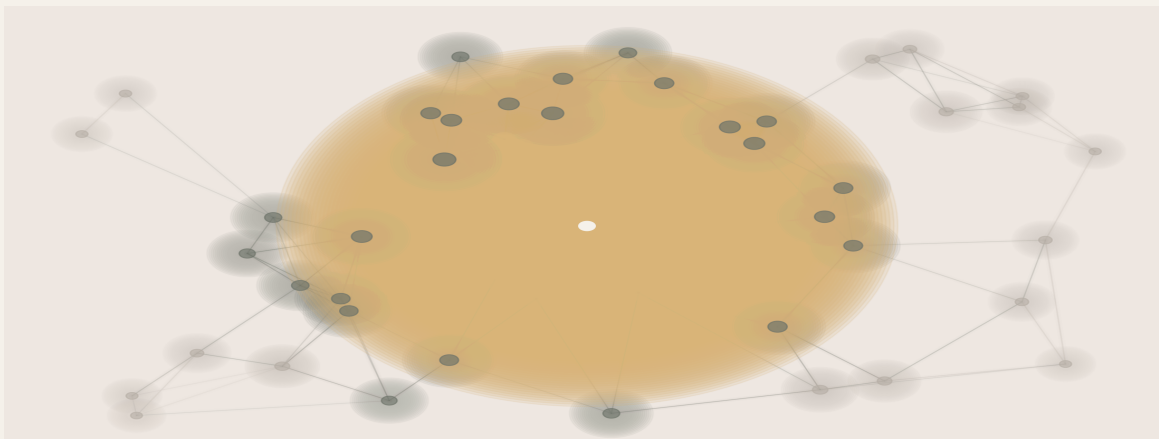

5-Amino-1MQ

NNMT Inhibitor · 50mg capsules

Oral NNMT inhibitor blocking the fat-storage enzyme while boosting intracellular NAD+. No injection required — a rare oral option in the metabolic category.

IDEAL FOR

Injection-averse patients; biohackers; add-on to injectable protocols

Recovery & Healing

Accelerate natural repair. Restore what time and injury take.

The regenerative portfolio is built around Mino's highest-volume compounds — peptides with extensive published research and broad patient appeal. From tendon injuries to GI repair, this category serves athletes, post-surgical patients, and anyone seeking accelerated tissue restoration.

BPC-157

Body Protection Compound · 5mg, 10mg

15-amino-acid gastric peptide with 100+ published studies. Accelerates healing of muscles, tendons, ligaments, nerves, and GI tract. Universal tissue repair with unmatched clinical depth.

IDEAL FOR

Athletes, post-surgical, GI issues, tendon/ligament injuries — broadest appeal

TB-500

Thymosin Beta-4 · 2mg, 5mg, 10mg

43-amino-acid peptide promoting cell migration and blood vessel formation. Cardioprotective with documented hair follicle activation.

IDEAL FOR

Slow-healing wounds, cardiac patients, hair thinning, musculoskeletal injuries

BPC + TB Blend

Synergistic Recovery · 10mg, 20mg

Pre-mixed BPC-157 + TB-500. Synergistic by design: BPC-157 primes tissue, TB-500 delivers repair cells. Single injection convenience at the highest volume.

IDEAL FOR

Highest-volume recovery product — athletes, post-surgical, chronic injuries

LL-37

Antimicrobial Peptide · 10mg

Human cathelicidin with broad-spectrum antimicrobial activity. Disrupts biofilms at the source. Cornerstone of immune defense and wound healing.

IDEAL FOR

Chronic infections, Lyme, biofilm conditions, immune-compromised, wound healing

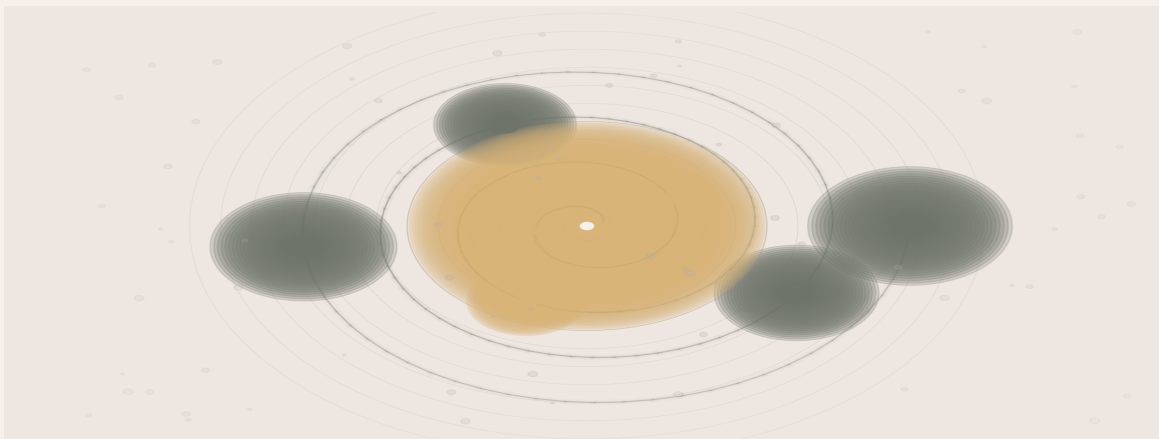

KPV

Anti-Inflammatory Tripeptide · 10mg

Alpha-MSH derived tripeptide. Potent NF-kB inhibitor with oral bioavailability — particularly effective for gut inflammation.

IDEAL FOR

IBD, Crohn's, UC, IBS, chronic inflammatory skin conditions, steroid alternatives

Longevity & Cellular Health

Target the root mechanisms of cellular aging — from the inside out.

The longevity category addresses four pillars of cellular aging: mitochondrial dysfunction, NAD⁺ depletion, telomere shortening, and senescent cell accumulation. These are compounds with published mechanisms that intervene at the deepest levels of biological aging.

NAD⁺

Cellular Energy Coenzyme · 500mg, 1000mg

Essential coenzyme for energy, DNA repair, and sirtuin activation. Declines ~50% by age 60. IV achieves highest bioavailability. The gateway longevity compound.

IDEAL FOR

Anyone over 35; fatigue; brain fog; athletes; metabolic patients

MOTS-C

Mitochondrial Exercise Mimetic · 10mg, 40mg

Mitochondrial-encoded peptide activating AMPK — the same pathway as exercise. Improves insulin sensitivity and fat oxidation at the cellular level.

IDEAL FOR

Longevity patients; those who can't exercise; metabolic optimization; athletes

Epithalon

Telomerase Activator · 10mg

Synthetic tetrapeptide activating telomerase and maintaining telomere length. Regulates the melatonin-cortisol cycle. Decades of gerontological research.

IDEAL FOR

Longevity-focused patients; sleep issues; optimization community

SS-31

Mitochondrial Membrane Peptide · 10mg, 30mg

Cell-permeable tetrapeptide stabilizing cardiolipin in mitochondrial membranes — restoring energy production from the structural level.

IDEAL FOR

Longevity patients; cardiac patients; fatigue; age-related decline

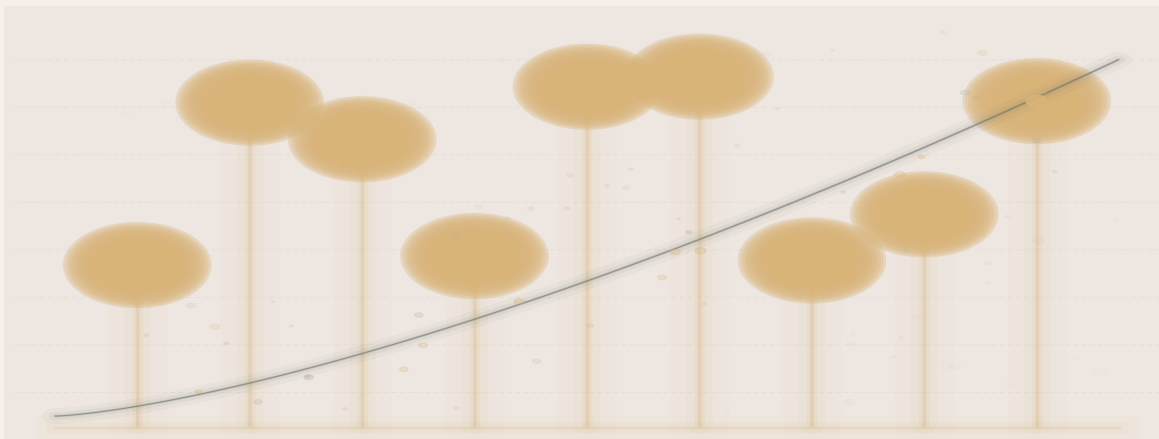

FoxO4-DRI

Senolytic Peptide · 10mg

Published in Cell (2017). Selectively triggers apoptosis in senescent 'zombie cells' while sparing healthy tissue. The most cutting-edge longevity compound in the Mino catalog.

IDEAL FOR

Advanced longevity patients; biohackers; premium price point

Growth Hormone Optimization

Restore the body's own architecture. Naturally. Precisely.

Growth hormone secretagogues represent one of the most requested categories in anti-aging medicine. Mino offers both upstream stimulators and direct recombinant GH — a complete toolkit for every patient profile.

CJC-1295

GHRH Analog · 2mg (w/DAC), 2mg (w/o DAC)

Synthetic GHRH analog in two formulations. With DAC: extended half-life for weekly dosing. Without DAC: physiologic pulsatile release. The foundation of every GH stack.

IDEAL FOR

Anti-aging; body composition; sleep quality; athletes — pair with Ipamorelin

Ipamorelin

Selective GH Secretagogue · 5mg

The cleanest GH release of any GHRP — no cortisol, prolactin, or appetite spikes. Almost universally paired with CJC-1295.

IDEAL FOR

Standard GH optimization pairing with CJC-1295

Tesamorelin

FDA-Approved GHRH · 5mg

The only FDA-approved GH secretagogue (Egrifta). Clinically proven visceral fat reduction with documented cognitive benefits. Premium positioning.

IDEAL FOR

Visceral adiposity; patients wanting FDA-backed compound; premium tier

HGH

Recombinant Growth Hormone · 10 IU, 15 IU

Direct recombinant HGH — chemically identical to pituitary GH. Most potent and predictable GH effects available. 30+ year clinical track record.

IDEAL FOR

Confirmed GH deficiency; non-responders to secretagogues; maximum GH effect

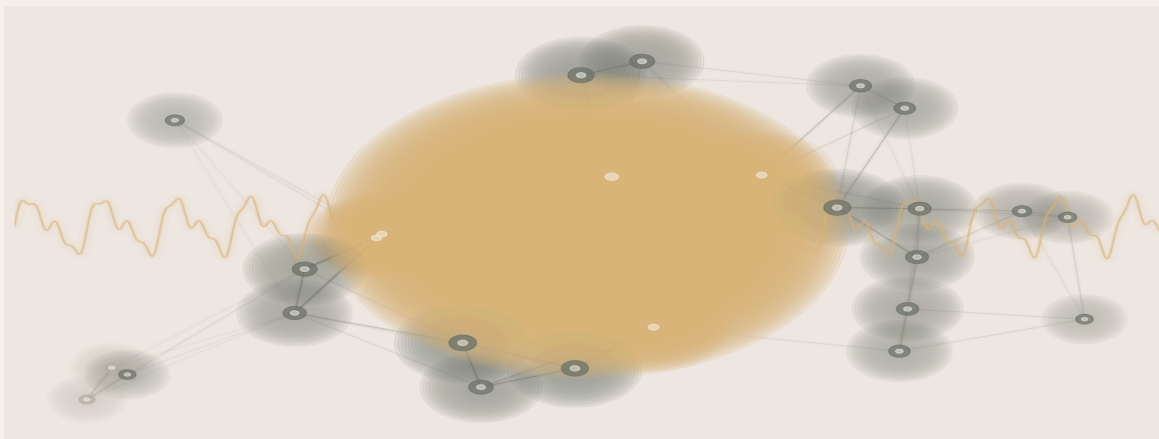

HCG

LH Analog · 5,000 IU, 10,000 IU

Mimics luteinizing hormone. Cornerstone of TRT fertility preservation. Prevents testicular atrophy. Highest-demand hormone optimization adjunct.

IDEAL FOR

Men on TRT; fertility patients — extremely high demand in men's health

Cognitive Enhancement

Sharpen the mind. Protect it. Elevate its potential.

Peptides that cross the blood-brain barrier and work at the neurotransmitter level represent a frontier that pharmaceuticals have barely entered. Mino's cognitive portfolio offers executives, clinicians, and optimization-focused patients compounds with decades of research behind them.

Semax

ACTH-Derived Nootropic · 5mg, 10mg, 30mg

The most popular nootropic peptide in clinical practice. A potent BDNF booster enhancing memory, focus, and learning with neuroprotective effects. Approved in Russia. Fast-acting.

IDEAL FOR

Executives; professionals; cognitive decline; post-stroke; TBI; students

Selank

Anxiolytic Nootropic · 10mg

Tuftsian analog with GABAergic anxiolytic properties. Anxiety reduction without sedation or dependence. Approved in Russia for generalized anxiety disorder.

IDEAL FOR

Anxiety patients (non-benzo option); SSRI alternatives; complement to Semax

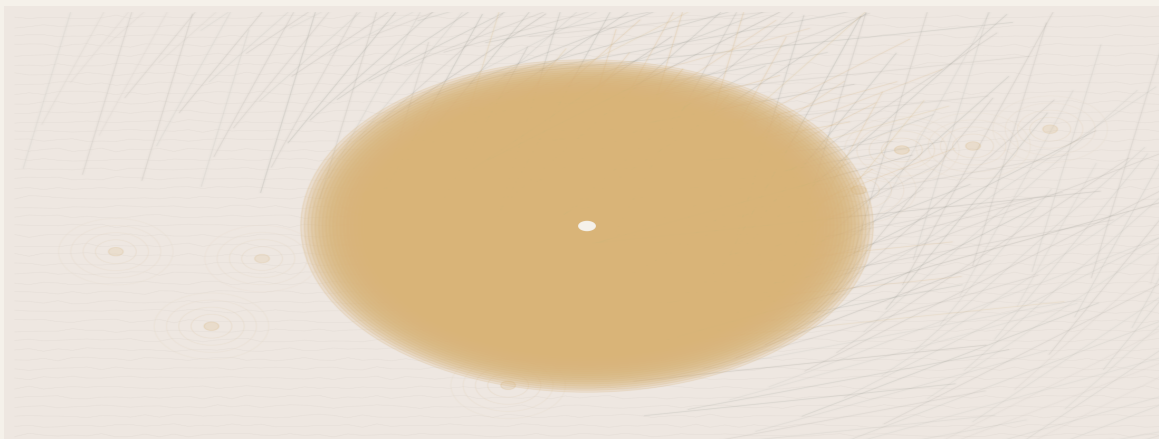

Pinealon

CNS Bioregulator · 10mg

Khavinson tripeptide targeting pineal and CNS gene expression for neuroprotection. Part of the established Khavinson bioregulator protocol.

IDEAL FOR

Longevity patients adding CNS support; Khavinson protocol followers

Skin & Aesthetics

Rejuvenation that begins at the gene level.

The aesthetics portfolio is built for the med spa channel — compounds that produce visible results through cellular mechanisms. GHK-Cu alone activates over 4,000 repair genes. This is the category driving mainstream coverage in Elle, Glamour, and Vogue.

GHK-Cu

Copper Peptide · 50mg, 100mg

Natural tripeptide-copper complex activating over 4,000 repair genes. Stimulates Collagen I & III synthesis. Injectable or topical (microneedling). Most validated aesthetic peptide available.

IDEAL FOR

Skin rejuvenation; post-procedure recovery; hair restoration; anti-aging

GLOW Blend

BPC + TB + GHK-Cu Complex · 70mg

Mino's hero aesthetic product. Tri-peptide skin blend: BPC-157 (repair) + TB-500 (cell migration) + GHK-Cu (collagen). Three mechanisms. One injection.

IDEAL FOR

Med spas — hero skin product; post-procedure; rejuvenation; premium margins

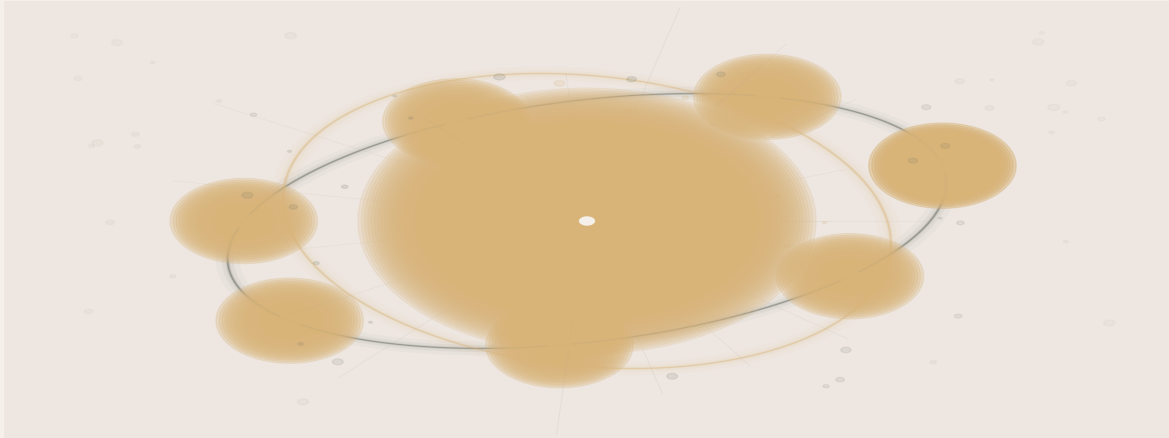

Melanotan 2

Melanocortin Agonist · 10mg

Alpha-MSH analog stimulating melanogenesis for enhanced tanning with significantly reduced UV exposure. Requires dermatologic monitoring and informed consent.

IDEAL FOR

Fair-skinned patients; tanning with reduced sun exposure — consent required

Sexual Wellness & Intimacy

Neurological. Hormonal. Profoundly human.

Unlike conventional treatments addressing blood flow mechanics, Mino's sexual wellness portfolio works at the neurological and endocrine level — addressing desire, connection, and the hormonal axis itself.

PT-141

Melanocortin Agonist (FDA-Approved) · 10mg

FDA-approved (Vyleesi). Works on the brain's desire pathway — not blood flow. Effective in both men and women. Fundamentally different mechanism than PDE5 inhibitors.

IDEAL FOR

Female HSDD; male ED non-responders to Viagra/Cialis; desire enhancement

Oxytocin

Bonding Hormone · 10mg

Hypothalamic neuropeptide enhancing bonding, trust, and empathy at the neurochemical level. FDA-approved for obstetric applications.

IDEAL FOR

Couples therapy adjunct; social anxiety; intimacy enhancement

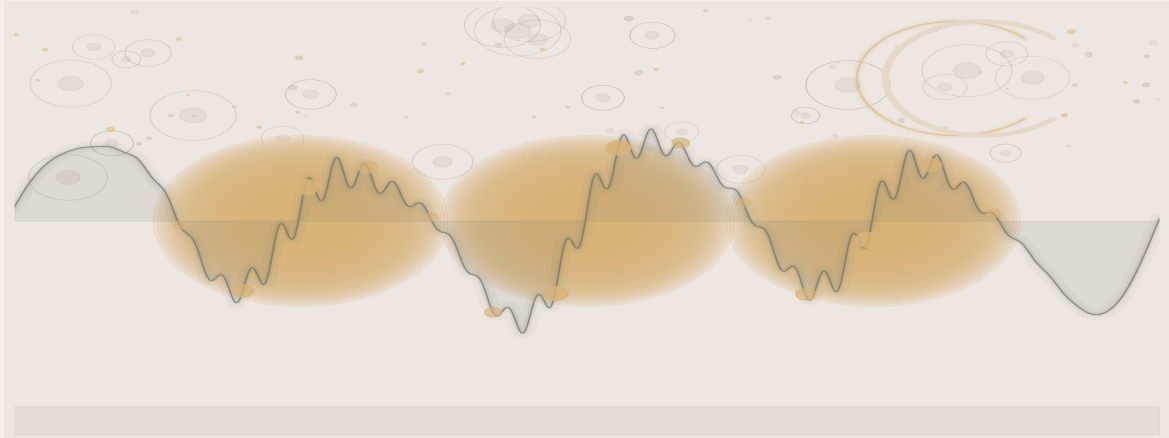

Kisspeptin

GnRH Axis Master Switch · 10mg

The upstream regulator of the entire reproductive axis. Triggers GnRH, LH/FSH, testosterone/estrogen. In IVF: eliminates ovarian hyperstimulation syndrome.

IDEAL FOR

Hypothalamic dysfunction; fertility; natural hormone optimization; IVF

Specialty & Sleep

Immune architecture. Deep recovery. Specialized clinical precision.

The specialty category addresses clinical needs outside standard categories — immune modulation, sleep architecture, and specialized performance applications. Thymosin Alpha-1 carries approval in 35+ countries. This category serves the most medically sophisticated segment.

Thymosin Alpha-1

Immune Modulator · 5mg

28-amino-acid thymic peptide approved in 35+ countries. Enhances T-cell and NK cell function through immune modulation — not suppression. Decades of safety data.

IDEAL FOR

Chronic infections; cancer immune support; Lyme; post-COVID; immune-compromised

DSIP

Delta Sleep-Inducing Peptide · 5mg, 15mg

Promotes delta-wave deep sleep by modulating sleep architecture — not through sedation. Reduces cortisol. Pairs synergistically with GH secretagogues.

IDEAL FOR

Poor sleep quality; reduced deep sleep (age 40+); sedative alternatives

IGF-1 LR3

Long-Acting Growth Factor · 0.1mg, 1mg

Modified IGF-1 with extended half-life. Direct mediator of GH's anabolic effects. Powerful tissue building — glucose monitoring required.

IDEAL FOR

Advanced patients; performance; tissue building — monitoring required

GHRP-2

GH Releasing Peptide-2 · 5mg

Hexapeptide GHRP with potent GH release plus appetite stimulation. Established clinical track record with favorable pricing.

IDEAL FOR

Patients needing appetite support + GH; underweight; budget-conscious

GHRP-6

GH Releasing Peptide-6 · 5mg

The original GHRP. Strongest appetite stimulation of any secretagogue. Indicated where appetite stimulation is the primary clinical need.

IDEAL FOR

Cachexia; underweight; wasting — patients needing appetite stimulation + GH
