

MINO PEPTIDES

WHOLESALE CATALOG · VOLUME I

The complete portfolio.

*Thirty-nine pharmaceutical-grade peptide compounds,
organized across six therapeutic categories, supplied
exclusively to licensed clinical practices.*

We built Mino because the clinicians we respected deserved a supply chain that respected them back.

For years, the peptide category was served by a patchwork of research chemical vendors, repackagers, and unverified international sources. The practitioners doing serious clinical work were forced to choose between expedience and integrity, and too often the patient paid the cost of that compromise.

Mino Peptides was founded on a simple premise: that medical-grade therapeutics should be sourced, documented, and delivered to the same standard as the rest of a modern clinical practice. Nothing more, and certainly nothing less.

Our portfolio is deliberately focused. Thirty-nine compounds, organized into six therapeutic categories, each selected because a credentialed clinician might reasonably incorporate it into patient care. We work only with cGMP-compliant manufacturing partners. We verify every lot through third-party analytical testing. We ship through a cold-chain network built for pharmaceuticals, not parcels. And we label our compounds honestly — FDA-approved, investigational, or research-only — because the difference matters.

What follows is the complete portfolio. We hope it serves your practice with the quiet reliability we set out to build.

Elizabeth Straus

The Portfolio

I	Regeneration	04
II	Metabolic	06
III	Longevity	08
IV	Performance	10
V	Cognitive	12
VI	Vitality	14

The Account

Wholesale Pricing Structure	16
Credentialing & Ordering	17
Regulatory & Compliance Framework	18

Regeneration

Compounds indicated in tissue repair, gastrointestinal healing, connective tissue recovery, and post-injury regeneration.

COMPOUND	FORM	REGULATORY STATUS	PRIMARY CLINICAL USE
BPC-157	Lyophilized vial	Research use	Gastrointestinal repair, tendon and ligament recovery
TB-500 (Thymosin Beta-4)	Lyophilized vial	Research use	Soft tissue repair, inflammation modulation
GHK-Cu	Lyophilized vial	Research use	Dermal regeneration, collagen synthesis, wound healing
PDRN (Polydeoxyribonucleotide)	Injectable solution	Investigational	Tissue regeneration, dermal rejuvenation, microcirculation
KPV	Lyophilized vial	Research use	Anti-inflammatory tripeptide, mucosal healing
LL-37	Lyophilized vial	Research use	Antimicrobial, immunomodulatory
Thymosin Alpha-1	Lyophilized vial	Research use	Immune support, post-viral recovery protocols

CATEGORY OVERVIEW

The regeneration category contains compounds with documented roles in tissue repair, extracellular matrix remodeling, and inflammation resolution. These are among the most clinically studied peptides in the portfolio, with a substantial preclinical literature and growing human investigational data.

BPC-157 and TB-500 have become cornerstones of integrative musculoskeletal protocols. GHK-Cu and PDRN are frequently incorporated into regenerative aesthetic practice. Thymosin Alpha-1 has a regulatory history as an approved agent outside the United States and continues to be studied in immune-mediated conditions.

TYPICAL APPLICATIONS

Orthopedic and sports medicine practices ·
Integrative medicine clinics · Regenerative aesthetic practices · Post-surgical recovery programs ·
Gastroenterology support protocols

STORAGE & HANDLING

Lyophilized vials are shipped at ambient temperature and should be refrigerated upon receipt. Reconstituted product should be used within manufacturer-specified stability windows. All compounds ship with lot-specific storage documentation.

DOCUMENTATION

Each lot is accompanied by a Certificate of Analysis from an independent testing laboratory verifying identity, purity, and endotoxin levels to pharmaceutical specification.

Regulatory status is stated honestly. Compounds labeled “research use” are not FDA-approved for the indications discussed and should be prescribed or dispensed only within a legitimate clinical framework consistent with federal and state law.

Metabolic

Compounds targeting weight management, glycemic control, body composition, and metabolic optimization.

COMPOUND	FORM	REGULATORY STATUS	PRIMARY CLINICAL USE
Tirzepatide	Lyophilized vial	<i>FDA-approved (brand)</i>	GLP-1/GIP dual agonist for weight management and glycemic control
GLP3-RT	Lyophilized vial	<i>Investigational</i>	Triple agonist under Phase 3 investigation for metabolic outcomes
Tesamorelin	Lyophilized vial	<i>FDA-approved (brand)</i>	Growth hormone-releasing hormone analog, visceral adiposity
AOD-9604	Lyophilized vial	<i>Research use</i>	Lipolytic fragment of human growth hormone
CJC-1295 / Ipamorelin	Lyophilized vial	<i>Research use</i>	Growth hormone secretagogue combination, body composition
MOTS-c	Lyophilized vial	<i>Research use</i>	Mitochondrial-derived peptide, metabolic regulation
5-Amino-1MQ	Oral capsule	<i>Research use</i>	NNMT inhibitor under investigation for metabolic modulation

CATEGORY OVERVIEW

The metabolic category sits at the intersection of the best-documented and fastest-evolving segments of the peptide market. GLP-1 and multi-agonist compounds have moved rapidly from endocrinology into mainstream primary care, aesthetic practice, and longevity medicine.

Mino supplies both FDA-approved branded agents where a legitimate dispensing pathway exists, and a curated set of investigational and research-only compounds for qualified clinical and research settings. Regulatory status is disclosed at the compound level and again at the order level.

TYPICAL APPLICATIONS

Medical weight management programs · Endocrinology-adjacent practices · Longevity and preventive medicine · Body composition and aesthetic optimization · Clinical research environments

SUPPLY CHAIN NOTES

Metabolic compounds represent the most regulated segment of the portfolio. Mino maintains documented chain-of-custody for every lot and works exclusively with manufacturing partners whose facilities we have verified.

NAMING CONVENTION

“GLP3-RT” refers to the triple-agonist investigational compound throughout Mino documentation.

Longevity

Compounds studied in the context of cellular aging, senescence, telomere biology, and healthspan extension.

COMPOUND	FORM	REGULATORY STATUS	PRIMARY CLINICAL USE
Epithalon (Epitalon)	Lyophilized vial	Research use	Telomerase activation, pineal-axis research
FOXO4-DRI	Lyophilized vial	Research use	Senolytic peptide targeting senescent cells
Humanin	Lyophilized vial	Research use	Mitochondrial-derived peptide, cytoprotection
Klotho	Lyophilized vial	Research use	Anti-aging protein, renal and cognitive research
SS-31 (Elamipretide)	Lyophilized vial	Investigational	Mitochondrial-targeted peptide, bioenergetics
NAD+ Peptide Complex	Injectable solution	Research use	Cellular energy and redox support
Rapamycin Peptide Conjugate	Oral	Research use	mTOR modulation protocols

CATEGORY OVERVIEW

Longevity medicine has emerged as one of the fastest-growing segments of private clinical practice. The compounds in this category are not approved for anti-aging indications, and we are explicit with our accounts that they are supplied for research and investigational use within appropriately structured clinical settings.

The scientific rationale for these compounds ranges from well-established mechanisms to early-stage hypotheses. Mino provides clinical reference material for each compound describing the current state of evidence, not marketing claims.

TYPICAL APPLICATIONS

Longevity and preventive medicine practices · Functional medicine clinics · Concierge and executive health programs · Clinical research environments

EVIDENCE STANDARDS

Mino clinical reference documents cite primary literature where it exists and clearly label the distinction between preclinical findings, early human data, and established clinical outcomes.

Performance

Compounds associated with recovery, lean tissue support, endurance, and physical performance protocols.

COMPOUND	FORM	REGULATORY STATUS	PRIMARY CLINICAL USE
Sermorelin	Lyophilized vial	FDA-approved (brand)	GHRH analog, growth hormone support protocols
Ipamorelin	Lyophilized vial	Research use	Selective GH secretagogue
IGF-1 LR3	Lyophilized vial	Research use	Long-acting IGF-1 analog, anabolic research
Follistatin-344	Lyophilized vial	Research use	Myostatin inhibition research
MK-677 (Ibutamoren)	Oral	Research use	Oral ghrelin mimetic and GH secretagogue
GHRP-6	Lyophilized vial	Research use	Growth hormone releasing peptide

CATEGORY OVERVIEW

Performance-oriented peptides have a long history of use in integrative and sports medicine contexts. The growth hormone-axis compounds in particular are among the most clinically familiar peptides in practice, with decades of prescribing experience behind them.

Mino emphasizes that these compounds are supplied to credentialed practitioners operating within legitimate medical frameworks, not for direct athletic enhancement. Sermorelin and related GHRH analogs have documented clinical utility in adult growth hormone-deficient states.

TYPICAL APPLICATIONS

Integrative medicine · Anti-aging and hormone optimization practices · Sports medicine and recovery protocols · Longevity clinics

IMPORTANT

Accounts serving athletic populations should be aware of sport-governing-body restrictions on growth hormone-axis compounds. Mino does not supply compounds intended to circumvent competitive sport regulations.

Cognitive

Compounds studied in the context of focus, memory, neuroprotection, and cognitive performance.

COMPOUND	FORM	REGULATORY STATUS	PRIMARY CLINICAL USE
Semax	Nasal / intranasal	<i>Research use</i>	Nootropic, neuroprotection research
Selank	Nasal / intranasal	<i>Research use</i>	Anxiolytic peptide, GABA modulation research
Cerebrolysin	Injectable	<i>Investigational</i>	Neurotrophic factor complex, neurorecovery research
Dihexa	Oral / topical	<i>Research use</i>	Angiotensin IV analog, synaptogenesis research
P21 (Cognitive Enhancer)	Research use	<i>Research use</i>	CNTF mimetic, neurogenesis research

CATEGORY OVERVIEW

The cognitive category contains compounds with neurological research literature ranging from well-established (Cerebrolysin in post-stroke recovery outside the U.S.) to emerging (Dihexa, P21). Mino supplies these primarily to functional neurology and integrative psychiatry settings operating under investigational frameworks.

None of these compounds carry FDA approval for cognitive enhancement indications. Clinical reference materials describe the evidence base honestly.

TYPICAL APPLICATIONS

Functional neurology · Integrative psychiatry · Concussion and TBI recovery programs · Longevity and cognitive wellness practices

ADMINISTRATION

Several compounds in this category are administered intranasally, which requires appropriate carrier formulation and patient education. Mino clinical reference materials include administration protocols by compound.

Vitality

Compounds for skin, hair, hormonal balance, and aesthetic practice.

COMPOUND	FORM	REGULATORY STATUS	PRIMARY CLINICAL USE
Melanotan II	Lyophilized vial	Research use	Melanocortin receptor research
PT-141 (Bremelanotide)	Injectable / nasal	FDA-approved (brand)	Sexual function, melanocortin agonist
SNAP-8	Topical	Cosmetic	Topical aesthetic peptide, expression line research
Matrixyl-3000	Topical	Cosmetic	Topical collagen-stimulating peptide blend
Argireline	Topical	Cosmetic	Topical acetyl hexapeptide, expression lines
Kisspeptin-10	Lyophilized vial	Research use	HPG-axis research, reproductive endocrinology
Gonadorelin	Lyophilized vial	FDA-approved (brand)	GnRH analog, reproductive endocrinology

CATEGORY OVERVIEW

The vitality category spans three distinct sub-segments: aesthetic injectable and topical peptides, reproductive endocrinology compounds, and sexual function agents. Each sub-segment has its own regulatory framework, and Mino maintains that distinction carefully in both catalog and sales practice.

Cosmetic-grade topical peptides ship under a separate documentation pathway from injectable compounds and are sold for formulation and professional application.

TYPICAL APPLICATIONS

Medical spas and aesthetic practices · Dermatology
adjacencies · Sexual health and reproductive
endocrinology practices · Hair restoration clinics

ENTERPRISE ACCOUNTS

The vitality and regeneration categories together represent the largest volume segment of Mino's enterprise medical spa business. Tiered pricing is structured to reward consolidated ordering across categories.

Wholesale Pricing Structure

Mino operates a three-tier wholesale pricing model. Tier assignment is based on trailing six-month order volume and is reviewed quarterly. New accounts begin at Tier 1 and may advance based on performance.

TIER I

Foundation accounts

Single-location practices, new accounts, and introductory volume commitments. Standard wholesale pricing and catalog access.

TIER II

Growth accounts

Multi-location practices and established volume accounts. Preferred pricing, dedicated account management, priority fulfillment.

TIER III

Enterprise accounts

Multi-state networks, enterprise medical spa groups, and institutional accounts. Negotiated pricing, clinical liaison support, and custom logistics.

Compound-level pricing is provided on the confidential wholesale price list available to credentialed accounts. Catalog pricing is not published in public-facing materials and is subject to lot and supply chain conditions.

Credentialing & Ordering

THE CREDENTIALING PROCESS

Every Mino account begins with a brief credentialing review. We confirm practitioner licensure, practice location, dispensing or administration authority, and the clinical context in which compounds will be used.

This is not bureaucracy for its own sake. It is the basis on which we can stand behind the integrity of the supply chain and make honest representations to our manufacturing partners about the clinical destination of every lot.

TYPICAL TURNAROUND

Credentialing is typically completed within three to five business days. First orders ship from our cold-chain fulfillment facility within 48 hours of approval.

ORDERING CHANNELS

Credentialed accounts order through a dedicated wholesale portal with real-time inventory visibility, lot-level documentation, and historical order records. Account managers are available for protocol questions and supply planning.

ACCOUNT MANAGEMENT

Cynthia — cynthia@mino.life

Sam — sam@mino.life

General inquiries — hello@mino.life

FULFILLMENT

Cold-chain shipping with temperature monitoring, tracked delivery, and signature-required receipt. Overnight and same-day options available for enterprise accounts.

Regulatory & Compliance Framework

The peptide category exists within a complex and rapidly evolving regulatory landscape. Mino's operating philosophy is that honesty about that landscape is a competitive advantage, not a burden.

REGULATORY STATUS, BY CATEGORY

Every compound in the catalog is labeled with its current regulatory status: FDA-approved (as a branded agent), Investigational, Research Use, or Cosmetic. These distinctions correspond to real differences in how a compound may lawfully be prescribed, dispensed, compounded, or applied. Our sales team is trained not to elide them.

THE COMPOUNDING LANDSCAPE

Recent enforcement activity around GLP-1 and related compounds has reshaped the compounding pharmacy environment. Mino maintains relationships with 503A and 503B facilities whose operating standards meet our expectations and who have not been the subject of adverse enforcement action.

RECLASSIFICATION ACTIVITY

Federal-level signals about peptide reclassification have been well covered in the trade and mainstream press. Mino tracks these developments and updates account-level documentation as the regulatory posture of individual compounds shifts.

OFF-LABEL VS. RESEARCH-ONLY

The distinction between off-label prescribing of an approved agent and dispensing of a research-only compound is critical and is reflected in how Mino labels, packages, and documents every shipment. We expect our accounts to maintain the same discipline.

This catalog is intended for licensed clinical professionals and is not a recommendation for any specific patient use. Nothing in this document constitutes medical advice or a guarantee of clinical outcomes. Regulatory status is current as of the edition date and is subject to change.
